TestPro CV100
Multifunction Cable Tester
Versatility for the Digital Age
Overview

*TestPro Multifunction Cable Tester is a versatile platform that was purpose-built to provide Copper, Fiber, PoE and Multi-Gigabit testing within a single solution designed to tackle assurance of infrastructure readiness across smart building technologies.*

Enterprises are fast embracing the modern smart building in an effort to realize cost savings through better management of the holistic infrastructure that encompasses the IP network, heating and cooling, building security systems and more. What all of this means to you is that the need for network bandwidth and power has never been greater and it is rapidly increasing, with the adoption of technologies such as PoE and Multi-Gigabit Ethernet over copper cabling.

To meet this growing need, AEM designed the TestPro, an affordable, versatile and rugged testing solution for today’s complex network environments. TestPro provides you with the ability to fully ensure infrastructure readiness to support the deployment of IoT connected devices be it lighting, multi-sensor cameras, building entry, wireless APs, monitors, computer workstations, or even long haul and single pair applications.

The best part, all of this comes at an affordable price that will allow organizations to outfit more technicians to optimize efficiency during both deployment as well as ongoing management and troubleshooting.

**Key Highlights:**

- All product kits come with two full function platforms, each with their own certificate of calibration.
- Two platforms mean complete test results are displayed on both Main and Remote and Autotest can be initiated from either end.
- In cases where you are performing tests into a switch such as PoE and Multi-Gigabit testing, each platform can be independently deployed giving you double the test equipment to get the job done.
- The modular platform allows you to add functionality as budget supports, your needs change or we introduce new testing capabilities.
- Extensive testing technology support: Cat5e-Cat8, PoE load (90W), link speed (1, 2.5, 5, 10Gig), SM and MM fiber optic, powered fiber voltage, single pair, long haul, traffic gen, BER, and more….

“*TestPro’s ability to certify the cable with a fast autotest combined with PoE validation and link speed qualification testing helps our technicians to get more done with a single test system and at a fraction of the price of the test equipment we used to use. Additionally, the ability to validate PoE and qualify link speed has allowed us to expand our service offering.*”

*Sean Ricketts, President Trinity Cabling Company*
Copper Certification

The TestPro platform features the most sophisticated RF measurement engine available and has independent ETL/Intertek verification of ANSI/TIA-1152-A (Levels IIIe and 2G), IEC 61935-1 Ed. 4 (Levels IIIe, IV and V) and IEC 61935-1 Ed. 5 Draft 46/595/CD (Levels VI Class I and II), and a 3GHz frequency range. What this means to you is that you can be assured of your certification results for CAT5e – CAT8 with an accuracy range that not only exceeds industry standards but even older well-known cable testers and that your testing needs will be met today and tomorrow. TestPro has also been approved by industry leading cable manufactures in support of their warranty programs.

As part of the six second CAT6A standard Autotest, TestPro will perform these measurements for both Channel and Permanent Link.

- Length including distance to fault
- Propagation Delay
- Delay Skew
- Loop Resistance
- DC Resistance Unbalance for both Pair to Pair and Wire to Wire
- Return Loss
- Impedance
- Insertion Loss
- NEXT
- PSNEXT
- ACRF
- PSACRF
- TCL
- ELTCTL

TestPro’s LiveWiremap™ facilitates rapid cable continuity testing with automatic display of result the moment the cable is attached. TestPro offers fault location for Return Loss and NEXT aiding in problem identification. Support for MPTL, Patch Cord, Cat8, and Coax is available through hot swappable Adapters. At the completion of the Autotest, you will get a highly visible Pass or Fail indication, and test results can be automatically saved with a customizable labeling scheme.

TestPro will store over 10,000 results in memory, but when it’s time to prepare printed reports, the included TestDataPro PC based software provides a way to organize and manage results and provide printed reports. If you’re testing PoE and Multi-Gigabit Ethernet in addition to cable certification, you can even produce printed reports that include all three measurements by combining the results of a certification Autotest and a Multi-Gigabit Autotest.

Both Channel and Permanent Link Adapters are included in the TestPro CV100-K50, K51, K60, K61 Kits. These Adapters are also sold separately models AD-CAT6A-CH, AD-CAT6A-PL.

Asia: AEM Singapore Pte. Ltd. 52 Serangoon North Ave 4 Singapore 555853
Revision 4/5/2019 | V.1.0
Fiber Optic Certification

TestPro's fiber optic measurements provide Tier-1 certification in compliance with IEEE 802.3 series, TIA-568.3-D, IEC-14763-3, as well as customizable limits for both Multimode and Singlemode Fiber Optic premise cabling. Additionally, these adapters include an integrated Visual Fault Locator (VFL) to provide a quick indication of a break in the fiber, as well as an integrated connection port for measuring electrical voltage for hybrid powered fiber applications in support of smart building initiatives. Encircled Flux (EF) compliant source means no need for bulky external adapters. Fiber optic test kits include, reference launch cords, coupler, interchangeable FC on TX port and interchangeable LC on RX port, cleaning kit, and carrying case. SC and FC adapters and reference launch cords are available as accessory items and sold separately.

As part of the four second Autotest, TestPro will perform the following measurements for both Singlemode and Multimode.

- Dual ended loss
- Single ended loopback loss
- Length and propagation delay
- Optical power meter OM1-OM5
- Integrated Voltmeter
- LiveWiremap
- Printed report includes test data and Compliant Networks

Multimode adapters support testing of OM5 fiber in addition to earlier generation fiber standards. For deployments where powered fiber is being used, TestPro's fiber adapter provides not only certification of the fiber optic cable but also provides you with the ability to validate electrical voltage on the adjacent copper wire in this hybrid cable type. This allows you to measure the electrical input voltage going into a PoE extender that is supplying PoE to end devices, and is a convenience for the technician to have everything needed for testing at their fingertips. Combine that with TestPro’s ability to measure actual PoE load (requires AD-NET-CABLE adapter) and you have a powerful solution with a unique set of capabilities that will allow you to verify and troubleshoot across various points in the network typology.

In single fiber applications, TestPro fiber adapters can be configured as a light source and receiver in power meter mode.

Both SM and MM Adapters are included in the TestPro CV100-K11, K51, K61 Kits. These Adapters are also sold separately models AD-SM-01 and AD-MM-01.

Revision 4/5/2019 | V.1.0
Power Over Ethernet (PoE) Validation

TestPro excels at validating PoE with the most comprehensive test functionality available and in compliance with TIA 1152A and IEEE 802.3 af/at.bt standards. What sets TestPro apart is the ability to validate the Power Source Equipment (PSE), a.k.a. the switch with actual power load, the only true way to validate if the level of power needed at the jack where a Powered Devices (PD) will deploy, such as a Camera, AP, Window Covering, etc. is to measure actual power at the jack with a report of available Voltage, Current, and Real Power expressed in Wattage.

As part of the validation test, TestPro allows you to select which standard you want to test against be it 802.3 af/at/bt. In doing so, TestPro will request the highest level of power load from the PSE for that standard and will perform the following tests:

- PSE Detection
- Voltage
- PSE Type
- PD Class
- PoE Cable Pairs
- Allocated Power
- Current
- Real Power
- Sustained Power Load Monitoring

For those pesky intermittent power issues, TestPro allows for sustained loading of the PSE over longer periods, through external loads. This allows you to monitor live for any power fluctuation that drops below the required level threshold. TestPro can also characterize the cabling links for DC resistance unbalance parameters either as part of a standard cable certification Autotest or as a one-off quick test.

PoE load testing is available in the TestPro CV100-K30, K60, K61 Kits. This Adapter is also sold separately model AD-NET-CABLE.

"If you manufacture, sell or install PoE products the CV100 TestPro will prove to be a MUST have tool in your lab or in your toolbox. The ability for us to easily ensure conditions at the other end of 100 meters of UTP cable with the precision and actual wattage at the remote jack was so helpful in our PoE motorized window treatment development. And with the ability to conduct sustained loading for long test cycles using the external load feature was another huge time saver for us."

Michael Braithwaite
CTO Screen Innovations

Revision 4/5/2019 | V.1.0
Multi-Gigabit Link Speed Qualification

TestPro qualifies cabling links for 1 / 2.5 / 5 / 10 Gigabit Ethernet in accordance with 802.3ab, IEEE 802.3bz, and IEEE 802.3an respectively. TestPro reports these values based on end-to-end Signal to Noise Ratio (SNR) operating margin, to provide an objective assessment of link performance under network load condition.

TestPro’s Multi-Gigabit Autotest is a quick and easy one button operation to ensure that a cabling link will support the desired network rate.

- Validation test
  - 10/100 Mbps
  - 1 Gbps
- QoS
  - SNR 2.5 Gigabit
  - SNR 5 Gigabit
  - SNR 10 Gigabit
- PoE Load Test

Wireless access points (APs) are one of today’s most broadly deployed type of devices and 802.11ac Wave 2 wireless APs require 2.5 and 5 GigE backbone speeds to run at maximum performance. TestPro’s Signal to Noise (SNR) based measurements will provide you with a pass/fail indication of supported speed.

Improvements in 10Gigabit technology, price, and performance have extended its reach beyond enterprise data centers to midmarket networks. Increasing bandwidth requirements and the growth of enterprise applications are also driving broader deployments of 10 Gigabit Ethernet. TestPro’s 10Gigabit testing provides a true indication through Pass/Fail indication as well as visibility into available headroom even down to per pair detail.

Multi-Gigabit qualification testing is available in the TestPro CV100 K30, K60, K61 Kits. This Adapter is also sold separately model AD-NET-CABLE.
TestDataPro Results Management Software

TestDataPro is a PC based results management software that comes standard with all models of TestPro. TestDataPro works in tandem with TestPro, which allows you to define projects and categorize test results into logical groupings once uploaded into the database. The database provides you with the ability to collaborate by viewing in-depth test details on-line as well as provide .pdf based printed reports. TestDataPro allows you to export results in .csv or .pdf format.

Options are available that allow you to combine an entire job worth of test results into a single .pdf document to pass along to a customer. Additionally, if you want to combine specific test results such as a Copper and Fiber certification tests, Multi-Gigabit and PoE test into a single Smart Building report, the flexibility in reporting allows you to customize the output to meet your specific needs.
## TestPro Product Kits

All kits come with:
- Two TestPro Platforms
- Certificate of Calibration for each TestPro
- USB Flash Drive with TestDataPro
- Carry Case/s
- Two Wiring Rack Hanging Straps
- Quick Start Guide
- USB cable
- Two Power Adapters with country specific Pins

### Model Number | Description | Additional Kit Components
--- | --- | ---
TESTPRO CV100-K05 | 1 GIGABIT BASIC TEST KIT | No additional adapters, basic testing performed through side RJ-45 jack
TESTPRO CV100-K11 | FIBER CERTIFICATION KIT | *Set of AD-SM-01 Adapters for Singlemode testing with FC/LC changeable connectors
*Set of AD-MM-01 Adapters for Multimode testing with FC/LC changeable connectors
*Two Sticklers 1.25 CleanClicker for LC/MU connectors
*Certificate of calibration for fiber adapters
TESTPRO CV100-K30 | 2.5G/5G/10G NETWORK VALIDATOR KIT | * AD-NET-CABLE Adapters for PoE/Multi-Gigabit
TESTPRO CV100-K50 | COPPER CERTIFICATION KIT | *Set of AD-CAT6A-CH Adapters for testing of the Channel link
*Set of AD-CAT6A-PL Adapters for testing of the Permanent Link
*OP-CAT6A Software License
TESTPRO CV100-K51 | COPPER/FIBER CERTIFICATION KIT | * Additional kit components listed in K50 and K11 kits
TESTPRO CV100-K60 | SMART BUILDING TEST KIT COPPER | * Additional kit components listed in K30 and K50 kits
TESTPRO CV100-K61 | SMART BUILDING TEST KIT COPPER/FIBER | * Additional kit components listed in K60 and K11 kits

Technical Specifications

**TESTPRO PLATFORM**
Each platform in a kit comes with a certificate of Calibration traceable to NIST.

- **SIZE**
  - 200mm X 105mm X 50mm

- **DISPLAY**
  - 5" TFT color touch screen, resolution 800 x 480 pixels

- **BATTERY**
  - Li-Ion
  - 3.7V / 13,200 mAh
  - 9 hr. battery life typical

- **POWER ADAPTER**
  - 5V, 3A (supplied)
  - 5-12V (supported)
  - 2.1mm DC jack

- **PLATFORM OPERATING SYSTEM**
  - Linux

- **CPU**
  - 1GHz ARM Cortex-A8

- **USB INTERFACES**
  - USB flash drive storage
  - MicroUSB for connecting to PC

- **RJ-45 SIDE PORT**
  - 10/100/1G network connectivity test port

**TEST ADAPTER TO PLATFORM INTERFACE**
- High-frequency connector rated for 5000 insertion cycles
- Hot-swappable

**MEASUREMENT ENGINE**
- 9-channel dual-ended mixed-mode RF and DC measurement engine
- Industry’s highest performance patent pending measurement architecture for data cable testing

- **FREQUENCY RANGE**
  - 0.1 – 3,000 MHz

- **FREQUENCY RESOLUTION**
  - 0.125 MHz
  - Supports all frequency ranges required by TIA 1152A, ISO/IEC 61935-1 and beyond

**COPPER TESTING MEASUREMENT TIME**
- CAT6A auto-test (including TCL and resistance unbalance tests): 6 sec
- CAT 8 Class II auto-test: 30 sec

**WIREFMAP**
- All possible wire connection situations identified, as long as two wires are connected end-to-end on any pins

**DC RESISTANCE**
- Range: 0 to 50 Ω
- Pair-to-pair and within pair resistance unbalance measurement meets TIA 1152A specs

**TONE GENERATOR**
- 730Hz and 1440 Hz

**DUAL-ENDED RF MEASUREMENTS**
- IL, RL, NEXT, ACR-F, TCL
- All mandatory and optional RF measurements as per TIA and ISO/IEC standards
- Single-pair link testing license with supported length for dual ended testing greater than 1,000 m

**LENGTH (PROPAGATION DELAY) MEASUREMENT**
- Dual ended test: 0 – 600m with 0.1m resolution
- Delay skew measurement with 1 nsec resolution

**SUPPORTABLE CABLES**
- 4-pair twisted pair cable
- 1-pair twisted pair cable
- Coax cable
- Optical cables (SM/ MM pair)

**TDR - RL**
- 0-100 m (resolution: 1 m)
- Distance-to-fault

**TDR - NEXT**
- 0-100 m (resolution: 1 m)

**IMPEEDANCE**
- 0-1000 Ω
- 0.1 Ω resolution in 90-110 Ω range

**FIBER OPTIC**

- **COMMON TO BOTH MM AND SM**
  - Supplied Test Interface: interchangeable LC on RX port and interchangeable LC on TX port

- **VFL LIGHT SOURCE**
  - Wavelength 650nm

- **VOLTMETER**
  - Measurement range: 0-60V DC

**POWER ADAPTER**
- DC adapter: 12V, supplied
- North America: AEM International (US) 5560 West Chandler Blvd, Suite 3, Chandler, AZ 85226 | toll free 833-572-6916 | 480-534-1232
- Asia: AEM Singapore Pte. Ltd. 52 Serangoon North Ave 4 Singapore 555853

Revision 4/5/2019 | V.1.0
Warranty and Extended Care Coverage

Standard Warranty
TestPro CV100 platform offers a 2-year warranty against manufacturing defects.

Extended Care
Extended Care is optional coverage for TestPro Kit that protects your investment with complementary repair or replacement (at our discretion) for any type of damage done to the TestPro platform. Coverage for test Adapters includes free yearly replacement of damaged Adapters, which must be returned as part of the replacement program. Free adapter replacement excludes individually purchased AD-SM-01 and AD-MM-01. Coverage also includes Calibration service for both TestPro platforms. Complementary loaner testers are available upon request and availability.

For TestPro Kits that include fiber optic adapters, Extended Care covers those adapters for yearly calibration and repair service.

Extended Care programs are offered in 1 and 3 year options.

Calibration Service
If Extended Care is not purchased and testers are due for calibration, stand-alone calibration service is available for TestPro Platforms and AD-SM-01 and AD-MM-01 fiber optic Adapters.
For a more detailed look at product capabilities, product kits, and to see the latest cable manufacturer warranty approvals, please visit AEM-Test.com/Products
