

TestPro Tone Generator functionality

TestPro Cable Certification Expert Tools menu provides functionality for Tone Generation.

Two different frequency tones at 500 Hz and 781 Hz are available.

Any brand of Tone Probe Receivers/Tracers can be used together with TestPro Tone Generator function to identify Cable connectivity to a specific Panel Port, or locate cable routing hidden behind a wall or ceiling panel.

Example Tracer that works with TestPro Tone Generator is TENMA TCT-700 pictured below (not included with TestPro)

The tones are generated on all 8 conductors to ensure good cable location function regardless of possible wire map issues.
